

## Press Release

*From:* Heritage Digital  
*Date:* 30 January 2007  
*Release Date:* 1 April 2007  
*Photographs or Prints?* Upon Request

---

(Florence, SC) **Heritage Digital, A SATIS Company**, announced that an agreement has been reached with the County of Florence (South Carolina) to provide programming and Information Technology services for the new Interpretative Center at Lynches River County Park.

The Lynches River Interpretative center at Lynches River County Park provides science learning through hand-on experience utilizing the natural and historical aspects of the park. The County has selected ZINC Projects of Ontario, Canada for the exhibit designs and construction. Park committee members visited Interpretative centers in Scotland and Canada prior to approving an innovative center design for Florence County.

Florence County retained Heritage Digital to design, install and maintain the Information Technology and the Internet, Extranet and Intranet for the park. The scope of the work includes interfacing the Extranet to various sensors, such as temperature, humidity, sunlight and water quality instruments. Due to the terrain, many of the sensor instruments will be solar powered and the data transmitted wirelessly to the data center and stored into the LRP database. In addition, there will be IR and video sensors placed throughout the park and Heritage Digital will acquire and stored that visual information into a SQL database. The sensor data will then be available for analysis using the Data Analysis Visualization Engine (DAVE) from Heritage Digital. This engine, first provided by Heritage Digital to the US Air Force for visualization of ultrasonic test data, will provide scientists from any location in the world with near real-time data from the Center and allow the remote charting and grouping of sensor data.

---

### *About Florence County:*

Florence is the hub of an eight county region called the "Pee Dee". It is the center for business, health care, communications, education, retail sales, cultural opportunities, and recreation. More information is available at [www.florenceco.org/](http://www.florenceco.org/)

### *About Heritage Digital:*

*Heritage Digital* is a privately held concern located in Florence, South Carolina and with field offices in Warner Robins, Georgia, programming facilities in Bangalore, India and design offices in Columbus, Ohio. The company, specializing in web application software, Internet/Intranet/Extranet applications, WAN/LAN Infrastructure Management and computer software programming was established in 1997. SATIS, Inc., the parent company, provides Robotic Control software systems and specialized software for a variety of military and medical applications.
